MEDITERRANEA

MED ROOM PLANA ISOLA

Self-bearing and independent structure with a resistant and anti-UV PVC Plana cloth. Fabric pitch awning supported by 43x65 mm horizontal profiles and 85x65 mm terminal. Movement on 60x100 mm guides. Horizontal profiles, terminal and guides in powder coated aluminum. All components of the sophisticated technology concerning movement, support of the cloth or assembling are invisible thanks to the elegance of the frame, which is more compact than Med Room Fly. Quick Assembly (pat. pending) facilitates connection methods of the structure elements. The inclination of the cloth facilitates the later water drainage, which flows to the ground through gutters within the frame and openings at the base of the support posts. Motorized movement system with standard SOMFY, RTS or IO-Homecontrol. Protection roof for the folded cloth is available upon request.

TENDE DA SOLE

GLISSE

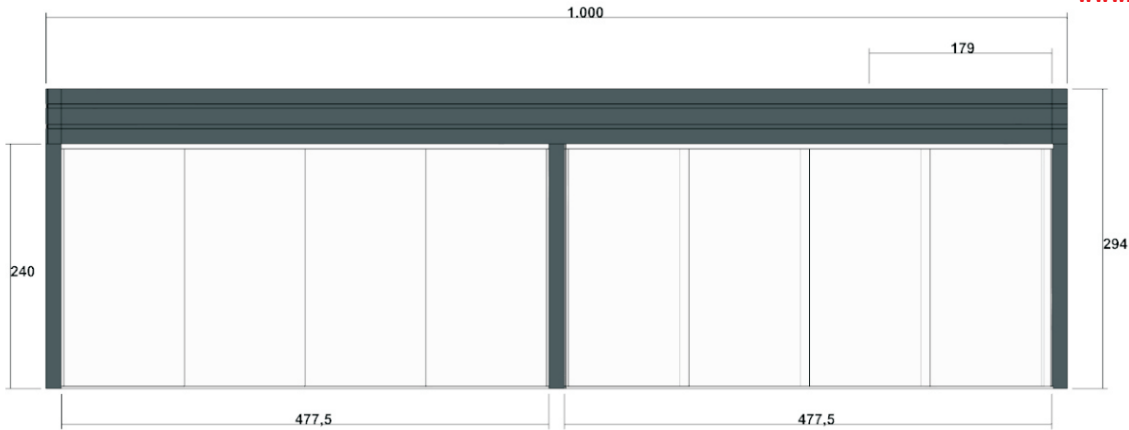

Glisse is characterised by the great attention to finishing and choice of materials, which join tempered glass (extra clear or satin-finished upon request) with silver and painted anodised aluminium and stainless steel. Each door in tempered safety glass, from 10 to 12 mm thick, slides on parallel stainless steel tracks by means of two rollers that permit fluid movement. The available configurations can have 2, 3 or 4 tracks up to a maximum of 8 panels in case of lateral or central opening. The stainless steel knobs are easy to be gripped, thus facilitating the sliding. A closing solution with turning knob or key is also available. Any condensation water is efficaciously removed through the combined action of a bulkhead placed at the base and the levelling of the tracks behind the lateral slamming stiles. They are recommended in order to close leaning or self-bearing pergolas of the Mediterranea products, porticoes, terraces, balconies, attics, room partitions, meeting rooms and glass rooms.
